

Intimus NSA Evaluated and Listed Crushers for the Physical Destruction of Desktop and Laptop HDDs

Intimus NSA Listed Hard Drive Crushers employ a hardened steel, v-shaped anvil to apply massive deflection forces to hard drives, bending, breaking and destroying disk chassis and platters.

The Intimus Hybrid Crusher is a dual operation device functioning as either an automatic powered crusher **or** manual hand crank device. Powered operation begins automatically when a drive is placed in the chamber and the door is closed. Drives are destroyed in 20 seconds or less. If power is not available, manual operation is done via a simple hand crank mounted to the side of the unit. This allows for use even in the event of loss of power or in areas where reliable power is not available such as field deployment environments. The same level of destruction is achieved regardless whether powered or manual operation is employed.

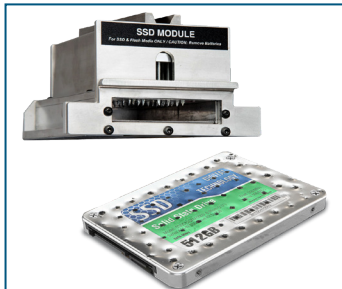

Key Features

- V-Shaped destruction anvil bends drives approximately 90° to bend/break heads, platters, motor and circuit boards.
- Compact design and quiet operation - use in any environment including office, data centers, IT labs, etc.
- Hand crank no power required operation - ideal for field deployment.
- Fast cycle time for maximum throughput capacity.
- Virtually maintenance-free and completely self-contained.
- Laptop carrier included for crushing 2.5 inch laptop drives. - Multiple laptop drives can be destroyed at once.
- Convenient top mounted carry handle
- Options including, Rear Output Slide, Auto Loader, Mounting Kit, Remote Control, and Field Deployment Case.

Model	Hybrid Crusher
Types of Media Accepted	All 3.5" form factor HDDs including 0.65", 1.0" & 1.65". All 2.5" form factor laptop drives (w/included drive carrier)
NSA Listed	Yes
Cycle Time	Auto - 20 Seconds - Manual - 8 Seconds
Destruction Level	Bends/breaks platters, heads, motor and circuit boards
Power / Operation	120 - 250 VAC, 50 or 60 HZ (specify with order) or can be operated via included hand crank
Weight	63 lbs.
Dimensions	11.625" D x 7.25" W x 21" H - 11" wide with crank handle

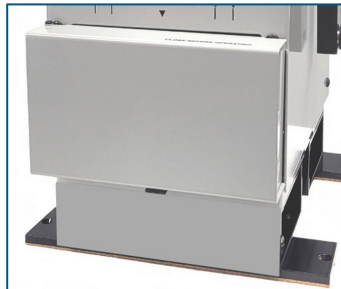

Options & Accessories: All options shown available on both crusher models. Other options available. consult website.

SSD Module - Transfers force from anvil to a series sharp spikes which puncture data bearing chips.

Rear Output Slide - ejects destroyed drives from the destruction chamber to increase throughput.

Screw Mounting Kit - heavy-duty brackets securely fasten crusher to table, workbench, or portable cart.

Field Deployment Case - rugged, custom fitted foam insert protects crusher from damage during transport.

Intimus Degausser / Crusher Value Kits

The easy way to meet NSA Degauss and Destroy Sanitization Requirements

The National Security Agency mandates that classified / top secret magnetic media must first be degaussed in an NSA Evaluated and Listed Degausser then physically destroyed with a crusher or shredder. This two-stage requirement is also mandated by the Department of Defense.

To make sourcing and purchasing the products needed to comply with these mandates easier, Intimus has created a series of Equipment Bundle Value Kits. In addition to greatly simplifying the purchasing process these Value Kits offer significant savings versus buying the items individually.

Top Secret Sanitization

Value Kit VK-1: Includes Model 20000 G Degausser and Hybrid Crusher

Unclassified Sanitization

Value Kit VK-2: Includes Model 10000 G Degausser and Hybrid Crusher

Don't Forget About Your Solid State Media - Upgrade to the Ultimate Data Destruction Value Kit
Value Kit VK-3 Includes Model 20000 G Degausser, Hybrid Crusher and FlashEx SSD Destroyer

Add a FlashEx SSD Destroyer for the Ultimate in Data Destruction Value Kit

Degaussing has no impact on SSD Media and because data is stored on small chips, standard crushers are equally ineffective. So make sure your End-of-Life Data Security Protocols include a method for destroying SSD media.

For the fast effective destruction of SSDs, nothing compares to the intimus FlashEx. This powerful, shredder destroys SSD Drives down to waste particles of only 4mm x 15mm. The FlashEx's small footprint and quiet operation make it ideal for any environment including data centers and offices. FlashEx is also versatile. In addition to SSD Drives, it is perfect for Credit Cards, Optical Media, Smartphones and USB Sticks.
